## EXPERIENCE

### DEVOPS/PYTHON DEVELOPER

2023 June - 2023 December

OOO AI Lab

Led the development of a Big Data project infrastructure from scratch, utilizing MongoDB for data storage and personally writing Python scripts for data parsing from websites. Configured and set up Yandex Cloud Managed Service for virtual machines and database management and employed Terraform for the declarative coding of required infrastructure. (IaC)

Developed technical documentation from the ground up for parsers and database operations as per management's request.

Implemented comprehensive backup and logging systems for all project activities.

Created specialized interfaces for parser operations, significantly enhancing work efficiency.

Focused on upskilling the team in DevOps methodologies.

Maintained close communication with Yandex Cloud providers for prompt resolution of development issues and strongly advocated for the adoption of DevOps methodology, successfully convincing the team at the project's inception.

## SUMMARY

DevOps engineer with experience in backend development. I simplify and automate everything I touch, from daily routine to infrastructure deployment processes. I calmly undertake work of any scale: several times I had to create from scratch things I did not know about the day before.

I am also striving for career development: I enjoy setting up processes in team work, find a common language with anyone, and can negotiate anything with anyone.
